PHYSICAL INFRASTRUCTURE

Extension of more drinking water facilities

Gargaon College is a college with more than 3000 undergraduate and postgraduate students. The authorities are always aware of the clean drinking water of the students. Therefore, measures are being taken to provide them with adequate drinking water. As per the plan, new clean drinking water systems have been installed at two additional locations. This system has helped the students in using water at all times. Provision of additional drinking water is considered to be an important task of the college authorities.
