GARGAON COLLEGE

## PHYSICAL INFRASTRUCTURE

### Biofloc Project

The biofloc project of Gargaon College is under construction. The diameter of the biofloc model is 4 meters. Biofloc is an aquaculture technology that helps in the conversion of unused feed and excreta into food. This is a modern and sustainable way of fish farming. This biofloc model of the college is expected to help in the secure livelihood of students. Around six hundred fish could be reared in this model project of the college. Per annum production is likely to be one quintal. The project would also enable the rearing of indigenous and exotic fish species.
